SWITCHES LIST (SOURCE);

EXTERNAL ROUTINE
        PAT$fao_out;                    ! formats a line and outputs to the terminal

SWITCHES LIST (NOSOURCE);

MACRO
        $fao_stg_count (string) =
                !++
                ! $fao_stg_count makes a counted byte string out of an ASCII string.
                ! This macro is useful to transform an fao control string into the
                ! address of such a string, whose first byte contains the length of
                ! the string in bytes.
                !--
                UPLIT BYTE (%CHARCOUNT (string), %ASCII string)%,

        $fao_tt_out (ctl_string) [] =
                !++
                ! $fao_tt_out constructs a call to fao with a control string,
                ! and some arguments to the control string.
                ! This formatted string is then output to the output device.
                !--
                PAT$fao_out ($fao_stg_count (ctl_string), %REMAINING)%,
```

```
$fao_tt_cas_out (ctl_string_adr) [] =
        !++
        ! $fao_tt_cas_out constructs a call to fao with the address of a
        ! control string, and some arguments to the control string. This formatted
        ! string is then output to the terminal.
        !--
        PAT$fao_out (ctl_string_adr, %REMAINING)%,

$fao_tt_ct_out (ctl_string) =
        !++
        ! $fao_tt_ct_out constructs a call to fao with a control string.
        ! This formatted string is then output to the terminal.
        !--
        PAT$fao_out ($fao_stg_count (ctl_string))%,

$fao_tt_ca_out (ctl_string_adr) =
        !++
        ! $fao_tt_ca_out calls fao with the address of a
        ! control string. This formatted string is then output
        ! to the output device.
        !--
        PAT$fao_out (ctl_string_adr)%;
